BUILD

App builder prompt pack

Three prompts that take an idea to a working tool.

1

Describe the problem

Prompt: I run a [business]. Every week I waste time on [task]. Ask me five questions before you suggest anything.

2

Plan before code

Prompt: Write a plan for a simple app that solves this. List the screens, the data and what could go wrong. Do not code yet.

3

Build the smallest version

Prompt: Build only the first screen. Use fake data. Tell me how to run it.

4

Test on real data

Prompt: Here is a real example. Run it through the app and tell me what breaks.

5

Ship and improve

Prompt: List the three changes that would save me the most time next week.

How to use it Paste each prompt into Claude in order. Do not skip the plan step.
