CLAUDE CODE

5 tricks nobody told you

Small things from recent Claude Code releases that save time every day.

1. **Press Up on an empty prompt**
   Restores a prompt you cleared with Ctrl+C, including pastes and images.

2. **Ctrl+F in the agents view**
   Find a session by name.

3. **Alt+Up and Alt+Down**
   Jump between groups in the agents view. Both shortcuts can be changed in keybindings.json.

4. **claude attach and claude logs**
   Type part of a session name and it still finds it: claude attach <name>, claude logs <name>.

5. **/rewind**
   Now lists the prompts you sent while Claude was still working.

Bonus: /autocompact now saves your auto-compact window per model.
